 **solar-breeze**  
robotic solar pool cleaner

The world's **only** **GREEN** pool cleaner

**Symptom**

Leaves and dust blow into your pool all day. This debris sits on the surface getting saturated until it sinks to the bottom. From there, a cleaner sucks up this debris while the cycle continues. What's wrong with this? For starters, you're fighting the symptom and not the root cause- the debris on the surface. Waiting for debris to sink means your pool is never swim-ready.

*What if your pool was ALWAYS swim-ready?*

With Solar-Breeze, you will NEVER hand-skim your pool again. You also won't waste precious time, energy, or money. Why? Because with Solar-Breeze, there are **no hoses, no cords, just solar power.**

Cleaning your pool all day with free energy from the sun means you can cut your pool pump run time up to 2/3.

With these savings, your **Solar-Breeze** pays for itself after just one swimming season.

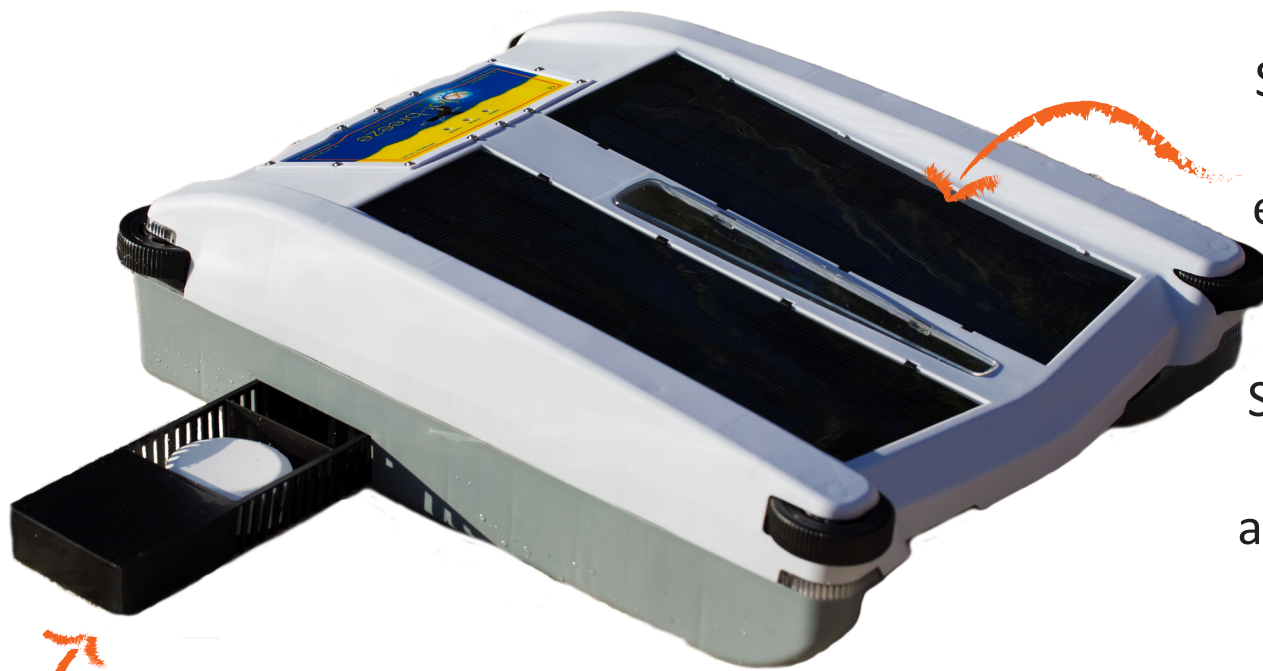

**Solution**

- Saves time, money, and energy
- Keeps pool crystal clear and swim-ready
- Intelligent robot covers surface every 2 hours
- Distributes chlorine evenly
- Collects leaves, dirt, debris, oils, pollen and more
- Reusable nylon micro-filter captures the smallest particles
- 12 Month Warranty
